

Report Banded California Gulls!

Scientists need your help tracking banded California Gulls!

Since 2008, we've banded over 1000 California Gulls in the South San Francisco Bay in an effort to learn more about their movements after their main breeding colony was restored to tidal action in December 2010.

The banded gulls have metal bands on the right leg and large alphanumeric bands on the left leg. We banded 545 adults with black bands with 3 white numbers and in 2010 we banded 500 chicks with yellow bands with 3 black numbers which are unique to that bird.

Please record:

- Location
- Time
- Band color
- Color of band numbers
- The 3 number code

Please send all reports to: Max Tarjan; mtarjan@sfbbo.org
